PROFESSIONAL SUMMARY

Third-year CS undergraduate at Woxsen University (8.7 CGPA) with hands-on experience developing and testing Java-based backend systems. Proficient in Core Java, OOP, Multithreading, and REST APIs. Experienced in writing clean, testable code and collaborating across product and DevOps teams. Seeking a Java Software Engineering Internship to contribute to real-time product development at scale.

EDUCATION

-
- **B.Tech Computer Science and Engineering** | Woxsen University, Hyderabad | 8.7 CGPA | 2023–2027

SKILLS

-
- **Languages:** Java, JavaScript, Python, SQL
 - **Frameworks:** Spring Boot, Spring Security, Spring Data JPA, Spring AI, React, JUnit5
 - **Core Java:** OOP, Collections, Exception Handling, Multithreading, Concurrency, Distributed Systems
 - **CS Fundamentals:** DSA, DBMS, OS, Networking, Microservices, System Design
 - **Tools:** Git, Postman, Maven
 - **Databases:** MySQL, PostgreSQL, Redis, MongoDB
 - **Cloud & DevOps:** AWS EC2, Docker, GitHub Actions (CI/CD), Linux, Kubernetes (learning)
 - **AI Tools:** Ollama, pgVector, Google Gemini API, Spring AI

EXPERIENCE

JPMorganChase – Software Engineering Job Simulation (Forage) | Jan 2026

- Built a microservices-based Spring Boot consumer using Apache Kafka to process high-throughput payment transaction events at scale, with validation and persistence via Spring Data JPA
- Designed RESTful balance endpoints via `@RestController`, integrated an external Incentive API using `RestTemplate`, and validated end-to-end flow with JUnit/Maven tests
- Followed Agile development practices — iteratively built, tested, and debugged microservice components; maintained code documentation via Maven project structure

KEY PROJECTS

QUASAR — Student Collaboration Platform

LINK : <https://quasar-8bv.pages.dev/>

Tech Stack: React, Spring Boot, OAuth2(github), JWT, PostgreSQL, Docker

June 2025

- Architected a distributed full-stack platform with Spring MVC, engineered 35+ REST APIs (Swagger/OpenAPI), cutting DB round-trips by ~80% via query optimization; secured with GitHub OAuth2 + JWT, role-based access control, and real-time WebSocket (STOMP) chat
- Integrated a semantic AI recommendation engine using pgVector and Ollama embeddings, deployed on AWS EC2 with Docker; validated reliability via JUnit5 unit and integration tests across all API layers

MergeRank — Competitive Programming Analytics Platform

LINK: <https://mergerank.pages.dev/>

Tech Stack: React, Node.js, Express, MongoDB, Google Gemini API

Feb 2026

- Built a full-stack analytics dashboard aggregating student coding activity across LeetCode, GitHub, Codeforces, CodeChef, and HackerRank using public REST APIs
- Designed batch-scoped leaderboards with placement readiness scoring, inactivity alerts, and CSV exports for mentor visibility; actively used by students

CERTIFICATIONS

-
- Java Full Stack & Spring Boot AI – Telusko
 - JUnit Testing – Udemy
